SetuCredit

Democratizing rural credit via India's ULI.

Voice-guided, consent-first alternative credit passports — unlocking instant micro-loans for Bharat's next 500 million.

ULI · ACCOUNT AGGREGATOR · BHASHINI · UPI

HACKATHON SUBMISSION

FINANCIAL INCLUSION & DIGITAL PUBLIC INFRASTRUCTURE • OCTOBER 2026

India's lenders underwrite salaries. Bharat earns from land, labour and livestock.

The data-rich, credit-poor paradox: the records that prove a rural household's creditworthiness already exist — just never in a form underwriting can see.

400M+
individuals excluded from formal credit

63M
micro-enterprises outside formal systems

₹3,000+
manual origination cost per small loan

36–60%
APR paid in predatory informal debt

Rigid underwriting

CIBIL, ITRs and salary slips are the only accepted proof of worth.

Siloed evidence

Patta records, DISCOM bills and mandi slips stay locked in separate registries.

Unviable unit cost

Manual verification costs more than a small-ticket loan can carry.

Predatory fallback

Excluded households borrow at 36–60% APR — or not at all.

A consent-first bridge from records to credit.

SetuCredit is a middleware orchestration layer that turns consented, non-financial records into a real-time readiness score — and a lender-ready package.

Voice onboarding

Bhashini speech in 12+ Indian dialects, on a 3G-friendly PWA.

Identity

Aadhaar OTP with DigiLocker verification — no paperwork.

Consent first

Explicit, time-bound, revocable consent via Account Aggregator.

Parallel ingestion

ULI and AA rails fan out together — land, utility, BBPS, banking.

Instant outcome

Readiness Index → lender webhook → UPI/IMPS disbursal.

OUTCOME

First utterance to credited funds, in under two minutes.

From first utterance to credited funds — six stages, consent locked in before any data moves.

CONSENT CAPTURED — DPDP ENFORCED IN CODE

01

Voice onboarding

Speaks in their own dialect — no forms, no literacy needed.

BHASHINI

02

Identity

Aadhaar OTP and DigiLocker verification bind the session.

DIGILOCKER

03

Consent

Purpose-scoped, time-bound, one-tap revocable.

ACCOUNT AGGREGATOR

04

Parallel pull

Land, utility and BBPS records fetched in one async fan-out.

FASTAPI ORCHESTRATOR

05

Scoring

Readiness Index computed from consented signals only.

BRI 0–100

06

Disbursal

Pre-underwritten package hits the lender; funds move instantly.

UPI / IMPS

BUILT IN
nothing persisted — pass-through

ENFORCED
missing consent is an HTTP 403

ENCRYPTED
TLS 1.3 · AES-256 audit logs

EXPLAINABLE
every score traceable to records

How the ecosystem connects, end to end.

Requests flow top to bottom; the orchestrator fans out to every DPI rail in parallel and scores in memory.

EXPERIENCE	React PWA — voice-first, low-bandwidth, installable on any Android device.
ORCHESTRATION	FastAPI gateway — async fan-out, consent gate, in-memory pass-through.
DPI RAILS	RBI ULI · Sahamati Account Aggregator · State land registries & DISCOMs · Bhashini.
INTELLIGENCE	Scoring microservice — Borrower Readiness Index, explainable by design.
LENDING	Partner NBFC webhook with HMAC-signed payloads → instant UPI/IMPS.

STACK

React PWA · FastAPI · Bhashini · RBI ULI · Sahamati AA · Scikit-learn / XGBoost · Postgres · audit ledger · Redis · sessions · Docker Compose

Real DPI credentials drop in behind each adapter interface — no architectural change when sandbox access lands.

The Borrower Readiness Index — explainable, consent-gated, honest.

BUILDING	NEAR-READY	LENDER-READY
Land ownership & history		DHARANI / BHULEKH
Utility payment discipline		DISCOM
Verified banking depth		SAHAMATI AA
Recharge consistency		BBPS
Lender-rail signals		RBI ULI

Heuristic v1 today; XGBoost drops in behind the same interface as pilot data accumulates.

CONSENT-FIRST BY CONSTRUCTION

Pass-through memory

Borrower non-financial data is never persisted — not even as derived features. Postgres keeps only audit events, consent records and outcomes.

Consent enforced in code

Every DPI pull requires an active, purpose-scoped consent. Missing or revoked consent is an HTTP 403 — not a policy in a PDF.

Encrypted end to end

TLS 1.3 in transit; AES-256 for every stored audit log and ledger entry.

Explainable outcomes

Every score is traceable to specific consented records — no black-box rejections for a first-time borrower.

DPDP Act aligned

Data minimisation, purpose limitation and revocation are implementation choices here — not compliance afterthoughts.

Turning low-ticket rural lending into a viable channel.

ORIGINATION COST	~~₹3,000+ manual~~	→ < ₹50	per approved loan
TURNAROUND	~~3–4 weeks~~	→ **under 2 minutes**	voice to decision
BORROWER BURDEN	~~36–60% informal APR~~	→ **11–14%**	formal bank rate

Free for borrowers
No fees, no hidden charges — ever.

0.75–1.5% origination fee
Paid by lenders — only on approved, originated loans.

Bharat's next 500 million — reachable, and bankable.

140M

smallholder farmers in the addressable segment — seasonal, asset-backed, invisible to CIBIL.

63M

micro-enterprises running on real cash flows that never enter a formal balance sheet.

Timely liquidity

Fertiliser procurement and micro-inventory turnover funded at the moment they matter, not three weeks later.

Formal identity creation

Each appraisal builds an auditable track record — the first step from thin-file to bankable.

Fairer rates

An escape route from 36–60% informal debt into 11–14% formal bank credit.

WHERE WE GO NEXT

- RBI sandbox validation
- First pilot NBFC
- Dialect expansion

Just as UPI unlocked digital payments, SetuCredit unlocks trusted credit data for Bharat.
